

Donnington GP Race Circuit

BARC Dunlop Mini Challenge

March 2023 - first race of the season

After the winter break we are back with the Mini Miglia. We have polished the Mig and fitted a fresh set of tyres !

Last year we had some VBox recording issues, which transpired to be totally self inflicted but now resolved - so will have a full season of action to feed onto Youtube.

Thursday saw a practice session at Donnington and in true British

car

Qualifying We had the car set up and on slicks for the start and then light rain came making for a very damp track, this was accompanied by a couple of red flags and made for a frustrating qualifying session with Nick positioning the Mig in 20h place on the grid.

Race 1 - Bringing the Mig onto the track it seemed the temperature was rising but then it dropped - bonnet off and everything checked with the engine seeming ok and not hot, so the assumption was, an intermittently faulty temperature sender.

The race started Nick was doing well and our Swiftune power plant was stronger than ever, a superb build by Nick and the boys.

But then, temperature started to rise again, then went down - no pinking, no power loss, Nick was of the mind it was a faulty temperature sender as it went up and down, but then it rose again even higher until - not a good noise came from the engine, cutting the ignition straight away Nick pulled off the track. Race 1 over :(

Now this is where Nick Swift excels - he came over took off the head and found it had indeed over heated, one of the exhaust valves had got so hot it was welded into the guide and had just kissed the piston, luckily causing no damage. Nick Swift had to remove both guide and valve due to the damage, replacing the guide in the paddock with nothing but his wits and a series-7 de-atomizer ! Head back on, everything bolted back together and our engine, back to racing health.

The over heating transpired to be caused by a faulty plug on the water pump loom which saw the pump switching on and off randomly until finally it stayed off.

Race 2 - Nick started in 25th position due to yesterday's DNF however our Swifutne engine was pulling beautifully as usual and it powered Nick right up to 12th by the end of the race ! A well enjoyed session at Donnington with a good result.

Unfortunately, our prediction the Vbox was fixed turned out to be wrong and we have no footage of the second race :(

It just goes to show that racing is never easy, its a constant battle for all involved to get the Mini's to the end of each race but we do have a fantastic team and an engine builder that goes above and beyond !
